Using artificial intelligence (AI) in the classroom has several advantages and disadvantages. On the (11)_____ side, AI can provide personalized learning, because it can react to each student differently. Also, AI-powered educational tools have instant (12)_____ to far more knowledge and information than human teachers. However, some people worry that AI might reduce the role of teachers, so they may lose their jobs. And, AI is not always (13)_____ and sometimes gives out false information, or says things which are not good for children to hear. In addition, AI cannot replace the emotional (14)_____ and kindness that a human teacher can give when a student is upset or worried. So, while AI offers promising benefits for education, the negative effects must also be (15)_____ carefully.

Transcript

Part B: Listen to the conversation and the question, and then choose the best answer.

6.

M: Are you ready to watch the game?

W: Yes!

M: Me, too. I hope our team wins.

W: So, can I have my ticket?

M: I thought you were buying them!

W: Oh no! Are you kidding me? I thought you were going to buy them!

M: Well, I guess we can watch it on TV...

Q: What is the problem?

7.

M: It's my first day working here.

W: Oh, nice to meet you. Which room are you going to be working in?

M: I'll be in the main office.

W: Oh, I work in the printing room just across from the main office.

We'll be coworkers!

M: Great! By the way, can you show me where the cafeteria is?

W: Of course. Follow me.

Q: Which sentence is NOT correct?

Part C: Dictation. Listen and write the missing words on the script.

Using artificial intelligence (AI) in the classroom has several advantages and disadvantages. On the positive side, AI can provide personalized learning, because it can react to each student differently. Also, AI-powered educational tools have instant access to far more knowledge and information than human teachers. However, some people worry that AI might reduce the role of teachers, so they may lose their jobs. And, AI is not always correct and sometimes gives out false information, or says things which are not good for children to hear. In addition, AI cannot replace the emotional support and kindness that a human teacher can give when a student is upset or worried. So, while AI offers promising benefits for education, the negative effects must also be considered carefully.
